PROFESSIONAL SUMMARY

Software Engineer with 3.6+ years of experience designing, developing, and deploying enterprise applications using C#, .NET Core, ASP.NET Core, SQL Server, Azure Cloud Services, REST APIs, and Microservices Architecture. Skilled in authentication and authorization, OAuth 2.0, OpenID Connect, SAML, CI/CD pipelines, database optimization, cloud-native application development, and system modernization. Experienced delivering scalable solutions for Fortune 500 energy companies, government organizations, and international clients in Agile environments.

TECHNICAL SKILLS

Programming Languages: C#, SQL, JavaScript, PL/SQL

Backend Frameworks: .NET Core 8, ASP.NET Core, Web API, Entity Framework Core, LINQ, Microservices, RESTful APIs, Design Patterns (Repository, CQRS, Singleton), SignalR

Frontend Technologies: React.js, HTML5, CSS3, Bootstrap 5, JavaScript ES6+, jQuery, AJAX

Cloud and Azure Services: Microsoft Azure, Azure Functions, Azure Active Directory (AAD), Azure SQL Database, Azure Service Bus, Azure Blob Storage, Azure App Service, Azure DevOps

Security and Authentication: OAuth 2.0, OpenID Connect (OIDC), SAML 2.0, JWT, Role-Based Access Control (RBAC), Two-Factor Authentication (2FA), Single Sign-On (SSO), Multi-Tenant Architecture, Identity Server

Databases: Microsoft SQL Server, MySQL, Oracle PL/SQL, Database Design, Indexing, Query Optimization, Stored Procedures

DevOps and Methodologies: Azure DevOps, CI/CD Pipelines, GitHub Actions, GitLab CI, Git, Agile, Scrum, Unit Testing, Code Review

PROFESSIONAL EXPERIENCE

Software Engineer – .NET Developer

January 2023 – Present

Bigscal Technologies Pvt. Ltd. – Surat, Gujarat, India

- Engineered 6+ enterprise-grade applications across energy, government, and hospitality sectors for Fortune 500 and international clients using .NET Core 8, ASP.NET Core, Azure, SQL Server, and React.js in Agile/Scrum environments.
- Architected and delivered scalable RESTful APIs integrated with 10+ frontend and third-party systems, lowering manual data handling overhead by 40% and accelerating feature delivery cycles.
- Enforced enterprise-level security by deploying OAuth 2.0, OpenID Connect (OIDC), SAML 2.0, JWT, and RBAC across multi-tenant platforms, achieving zero authentication-related security incidents post-launch.
- Spearheaded modernization of legacy monolithic applications from .NET Framework 4.5.1 to .NET Core 8, boosting system performance by 35% and enabling cloud-native deployment on Microsoft Azure.
- Established Azure DevOps CI/CD pipelines with automated build, test, and release stages, slashing deployment time from 3+ hours to under 10 minutes and increasing release cadence by 300%.
- Guided junior developers through structured code reviews and pair programming sessions, raising team code quality scores by 25% and decreasing post-release defect rates across 4 consecutive project deliveries.
- Tuned complex SQL Server and MySQL queries, execution plans, and indexing strategies, cutting critical report generation time by 50% and improving overall application response times by 30%.

KEY PROJECTS

Cheniere Capacity Loss Evaluation and Reporting System

Sep 2025 – Present

Client: Cheniere Energy, USA (Fortune 500 – LNG Energy)

Technologies: .NET Core 8, MySQL, PI System, Denodo, Maximo, REST APIs, Azure

- Engineered an enterprise analytics platform for real-time monitoring of capacity loss and operational performance across multiple LNG production facilities, processing thousands of data points per hour.
- Integrated PI System time-series data with the Denodo virtualization layer to consolidate operational metrics from 5+ data sources, enabling data-driven decision-making for engineering and operations teams.
- Mechanized reporting pipelines that decreased manual capacity analysis effort by 60%, freeing 20+ engineering hours per week for higher-value operational tasks.

Custom Identity Provider – Multi-Tenant SSO Solution

Jun 2025 – Sep 2025

Client: BeFree (International)

Technologies: .NET Core 8, React.js, OAuth 2.0, OpenID Connect, SAML 2.0, JWT, 2FA, RBAC

- Architected a multi-tenant Single Sign-On (SSO) platform from the ground up supporting OAuth 2.0, OpenID Connect (OIDC), and SAML 2.0 protocols, serving multiple enterprise clients at launch.
- Executed Role-Based Access Control (RBAC) and configurable Two-Factor Authentication (2FA) with SMS, email, and authenticator app support, meeting enterprise compliance and security requirements.
- Lowered client onboarding time by 70% through a self-service tenant provisioning portal, enabling non-technical administrators to configure authentication policies without engineering intervention.

Kiosk Management and Auto-Update System

Mar 2025 – Jun 2025

Client: RoomMatik, Spain

Technologies: .NET WinForms, C#, Azure Blob Storage, Desktop Application, REST APIs

- Constructed a centralized kiosk management platform enabling remote deployment and systematized software updates across distributed kiosk environments spanning multiple locations.
- Designed a delta-update mechanism that minimized update package size by 65%, substantially lessening kiosk downtime during update cycles and improving uptime SLA compliance.

Traveler Registration Form Management System

Jan 2025 – Mar 2025

Client: RoomMatik, Spain

Technologies: .NET Core 8, ASP.NET Core Web API, SQL Server, Azure, PDF Generation

- Designed and launched a compliance automation platform for traveler registration, digital document generation, and secure document retention serving hospitality and car rental businesses.
- Computerized regulatory document submission workflows, lowering manual compliance processing time by 80% and eliminating data entry errors across all client deployments.

Contract Management System

Jun 2024 – Jan 2025

Client: Cheniere Energy, USA (Fortune 500 – LNG Energy)

Technologies: .NET Framework 4.5.1, .NET Core 8, Azure DevOps, SQL Server, REST APIs, CI/CD

- Delivered a contract lifecycle management platform handling cargo and commodity agreements with multi-stage approval workflows, audit trails, and third-party system integrations.
- Led the migration of core modules from .NET Framework 4.5.1 to .NET Core 8, boosting application performance by 35% and enabling full Azure cloud deployment.
- Streamlined release operations by establishing Azure DevOps CI/CD pipelines, cutting deployment cycles from 3+ hours to under 10 minutes.

GIFTCity Power Management System

Jun 2023 – Jun 2024

Client: Gujarat International Finance Tec-City (GIFT City) – Government of India

Technologies: .NET Core, MySQL, Payment Gateway Integration, SMS Integration, RBAC

- Constructed a government-grade utility management platform for electricity billing, online payments, document generation, and customer notifications serving thousands of GIFT City residents.
- Integrated a payment gateway processing 1,000+ monthly transactions and an SMS notification system achieving 99.9% delivery reliability across all registered users.
- Applied Role-Based Access Control (RBAC) across 5+ distinct user roles including admin, billing officer, and customer, ensuring data security and full regulatory compliance.

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science and Engineering

2019 – 2023

Sagar Institute of Research & Technology, Bhopal, India
